

## Hardness Monitor

## Type CaMguard

### Brief description

- Menu driven programming utilizing LCD-display (2 lines)
- Choice of languages
- Built-in audio signal for programmable signal indicators
- Adaptable to user specific requirements by built-in programmable options
- Simple control utilizing easy to follow symbols
- Locking of programming possible by use of a code number
- Programming a service telephone number possible
- Activation of analysis by either : flow, time delay, external contact or manual control
- No waste of water between two analysis
- Internal circulation circuit for mixing of indicator fluid and water sample
- Substantial status information employing info key
- Robust housing for industrial use
- Additional functions for service personnel : flushing and maintenance
- Optional possibility for recorder output, 0-20mA.
- Inputs : 2 free programmable inputs for water meter, external start, external stop or alarm reset
- Outputs : 3 free programmable outputs (potential free) for impulse, analysis activated, result of analysis, alarm contact
- Security of program information against supply failure, as all program information is stored without battery.
- Manufactured in accordance with EMC codes of practice.
- Available in wall mounted performance
- Available in 115V and 230V
