

# PYROLOX®

## A mined ore, PYROLOX® effectively reduces iron, sulfur and manganese from problem water

---

A naturally mined ore, Pyrolox® is a mineral form of manganese dioxide which has been used in water treatment for more than 75 years. Pyrolox® is a granular filtration media for hydrogen sulfide, iron and manganese reduction. Pyrolox® functions as a catalyst, but itself remains relatively unchanged.

Pyrolox® works on a principle whereby the hydrogen sulfide, iron and manganese are oxidized and trapped on the media while simple backwashing cleans the bed. No chemical regeneration is required, nothing is imparted into the drinking water and Pyrolox® has a high capacity for low contaminant concentrations.

Pyrolox® can be used in conjunction with aeration, chlorination, ozone or other pretreatment methods for difficult applications. Chlorine or other oxidants accelerate the catalytic reaction.

**Because of its heavy weight, it is very important that Pyrolox® filters are backwashed properly to insure adequate bed expansion and continued service life.**

---

### ADVANTAGES

- Effective reduction of iron sulfur and manganese
- Durable material with long service life and low annual attrition of bed
- No chemical regeneration required only periodic backwashing

---

### PHYSICAL PROPERTIES

Color:	black
Bulk Density:	125 lbs./cu. ft.
Mesh Size:	8 x 20
Effective Size:	0,51 mm
Uniformity Coefficient:	1,7
Specific Gravity:	3,8

---

### CONDITIONS FOR OPERATION

pH :	6,5 – 9,0
Bed depth:	application dependent
Backwash flow rate:	8 – 10 gpm per sq. ft.
Backwash expansion rate:	15 - 30% of bed depth
Service flow rate:	5 gpm/sq. ft.
Freeboard:	40% of bed depth

# PYROLOX<sup>R</sup>

Filtermaterial effectively reduces iron, sulfur and manganese from problem water

## Service Flow Pressure Drop

Pounds per Square Inch/Foot of Bed Depth

**Flow Rate** (Gallons per minute / Square Foot of Bed Area)

## Backwash Bed Expansion in %

**Flow Rate** (Gallons per Minute / Square Foot of Bed Area)
